

Link System

The RollEase patent pending link-drive system is designed to drive multiple roller shades that are operated by one roller shade clutch. The unique design allows for easy snap-in installation with the added ability to precisely level shades to prevent telescoping. Leveling is accomplished by adjusting the leveling screw located in the middle of the link system. Each pair of shades can be leveled using the screw. Moreover, as an added measure of safety, the link mechanism can't be removed without first removing the screw. Works with R-Series, Skyline, and Galaxy clutch lines.
