Motorized Roller Romans

The new RollEase **Roller Roman-Shade Lift-Line Spools or Clips** allow workrooms to easily fabricate a Roller Roman Shade with the most complete and reliable clutch systems in the industry. RollEase's award winning lift systems are specified by Interior Designers, Architects, and Workrooms worldwide. RollEase is considered the finest manually operated lift systems available and are used 3-to-1\* over the competition.

The new spools or clips combined with RollEase's vast array of clutch options, including Galaxy Clutch line, will enable Heavy Roman Shades to be raised quicker (larger diameter take-up spool) with smoother and lower pull forces when compared to any other Roller Roman clutch. Works great with motorized systems too! Roller Roman Lift-Line Spools & Clips come in three sizes 1<sup>1</sup>/<sub>4</sub>" , 1<sup>1</sup>/<sub>2</sub>" and 2" tube sizes. Spools use ribbon-tape or lift line, Clips use lift line.

\* RollEase estimate based on a Sullivan Marketing Group study.
