

Skyline SL-20 to replace SL-16

The new RollEase **SL-20 Clutch** features the same size exterior dimensions of the SL-16 but with a longer Velvetrol configured housing with more springs. More springs working together, each with a little less resistance, makes the cumulative effect better than fewer springs working harder individually; the result is a smoother releasing clutch that can hold more weight. *The ultimate in spring teamwork™.*

The SL-20 is rated to 20 lbs. (9 kg) on 1.5 inch (38mm) tube and 15 lbs. (6.75 kg) on 2 inch (50mm) tube. Stock colors: White and Black, Special order: (Vanilla, Brown, Cream, Beige, Gray). The SL-20, part number SL20H53, will be the same price as the SL-16. Effective February 2008 when the SL-20 becomes available the SL-16 will be phased out.

All current Skyline brackets and pin-ends will continue to work with the SL-20 but also included in this Skyline enhancement is a new **Heavy Duty Pin-End**, part number SLPEHD53, which also has a longer housing and a new heavy duty spring for greater horizontal tension forces. The Heavy Duty Pin End can be used with the SL-20 and with motorized shades. The Heavy Duty Pin End is rated for shades weighing up to 100 lbs. Stock colors: White and Black, Special order: (Vanilla, Brown, Cream, Beige, Gray)

Samples of SL-20 and Heavy Duty Pin End are available now (limited quantities) and production inventory is scheduled to be available February 2008.

Coming Soon:

Winter 2008: PESA (Pin-End Spring Assist for Skyline; 1¹/₄ inch (32mm) and 1¹/₂ inch (38mm) tube sizes)

Spring 2008: Spring Assist for Skyline (similar to R-Series Spring-Assist except with Skyline style brackets and clutch)

Spring 2008: Cassette 80 & 120, Raceway for Skyline
