

## PRODUCT OVERVIEW

The **Blindware** range of base rails includes a standard and a premium selection. The premium range includes Deluxe Oval and Deluxe Flat styles, which include many value-added features like heavier weight, rear bumpers, wire guide options and fabric feeder funnels. The standard range includes 22mm round and standard oval design and are good quality general purpose products. All base rails are retained using either 10mm or 15mm spline with double side tape pre-applied.

The Deluxe base rails are both heavier weight design and work perfectly with regular chain operated or motorised roller blinds to provide improved fabric appearance. They are both also well suited to work with **ZeroGravity**, due to the heavier weight and ability to slide extra weight rods inside the profiles as required. The optional silicon bumper with a built-in air cushion design doesn't just reduce noise, it removes it near zero. No banging or dull thud as the blinds move with the breeze inside the room, just near total silence for bedrooms, boardrooms or anywhere that needs extra peace and quiet.

Wire guide end caps are available for both the Deluxe Oval and Deluxe Flat base rails, creating even greater functionality and value-add options. The Deluxe Flat base rail is also designed to be used with the **SunBoss** 80mm Blackout Cassette system, using a special end cap that fits inside the felt lined side channels.
