

PRODUCT OVERVIEW

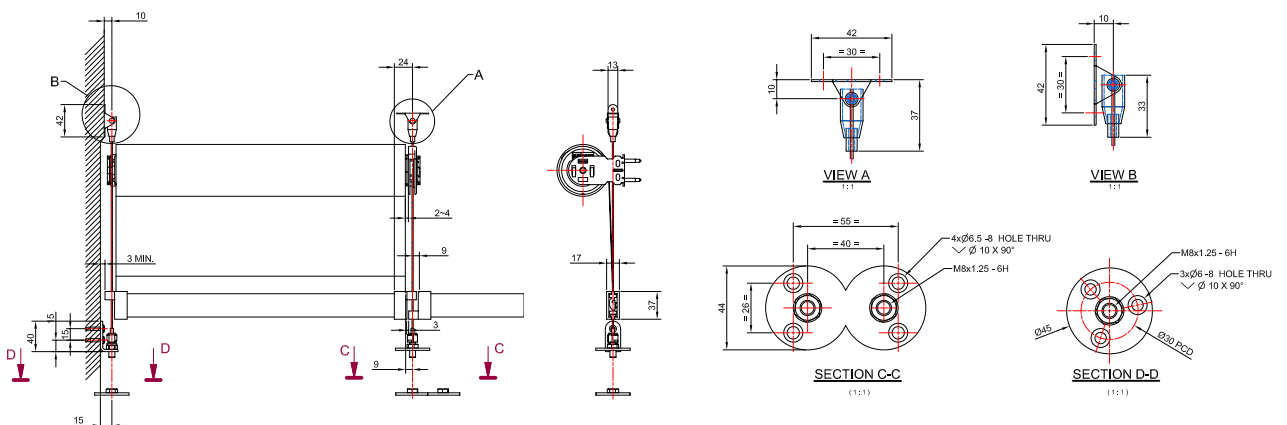

The Wire Guide System is designed to limit the free movement of the base rail of a roller blind that might cause damage or knocking against window recesses or glass. Wire guides are normally installed into areas with long drop blinds or areas exposed to high winds or draughts, such as from building A/C vents. The base rail is fitted with special end caps that encapsulate a fixed vertical wire that restrains the base rail from lateral movement.

The integrated wire tension system helps the guide wires remain taut and the blind secure to provide long-term stability and trouble-free use for the life of the blind. The Wire Guide System can be mounted inside a window recess, top fixed or floor mounted. The end caps are designed to operate individually, or as inverted pairs to share a common wire for linked blinds.

FEATURES & BENEFITS

VERSATILE	<ul style="list-style-type: none"> Can be used with a wide variety of SunBoss brackets, including normal 40mm and 55mm, MEGA brackets; as well as cassette and fascia systems (excluding side channels).
